INFRA360 · DEVOPS AI CHEAT SHEET

100 Claude Prompts for DevOps in 2026

Built from production incidents, messy Terraform, broken pipelines, Kubernetes fires, cloud bills, and on-call pain.

COPY. PASTE. ADAPT. SHIP CAREFULLY.

01. IAC & TERRAFORM

"Write a Terraform module for {resource} on {cloud} using {naming_convention}. Include variables.tf, outputs.tf, README, and sensible defaults."

"Review this Terraform plan for security risks, cost traps, destructive changes, and drift risk: {paste_plan_output}."

"Refactor this Terraform module to support multi-region deployment without duplicating code: {paste_existing_module}."

"Explain what this Terraform state drift means and what is safe to import, taint, ignore, or recreate: {paste_drift_output}."

"Write a Terraform module interface for {service} that is reusable across dev, staging, and production."

"Convert this manually created cloud resource into Terraform code and include import commands: {paste_resource_details}."

"Review this Terraform code for hidden production risks before merge: {paste_code}."

"Create a Terraform migration plan from {old_module} to {new_module} with zero downtime."

"Write a safe rollback plan for this Terraform change: {paste_diff}."

"Generate a Terraform variable validation strategy for {module} to prevent unsafe production inputs."

02. KUBERNETES DEBUGGING

"My pod is {pod_status}. Here are logs: {paste_logs}. Here is describe output: {paste_describe}. What is wrong and how do I fix it?"

"Explain why this pod is Pending and rank the most likely causes: {paste_kubectl_describe_pod}."

"This pod is CrashLoopBackOff. Diagnose whether it is config, command, dependency, memory, probe, or permission related: {paste_logs}."

"My pod was OOMKilled. Analyze the memory pattern and recommend requests, limits, and code-level checks: {paste_metrics}."

"Explain this ImagePullBackOff error and give me the exact fix path: {paste_describe}."

"Review these readiness and liveness probes for production safety: {paste_yaml}."

"This service is not reachable inside the cluster. Debug DNS, endpoints, selector, port, and network policy issues: {paste_yaml}."

"Create a step-by-step kubectl debugging runbook for {error_name} in a {cluster_type} cluster."

"Explain why this node is under pressure and what I should evict first: {paste_node_describe}."

"Analyze this Kubernetes event stream and identify the real root cause, not the noisy symptom: {paste_events}."

03. CI/CD & GITOPS

"Write a GitHub Actions pipeline for {language} that runs tests, builds a Docker image, scans it, and deploys to {environment}."

"This ArgoCD sync is failing. Here is the error: {paste_error}. What is the root cause and fix?"

"Write a canary deployment strategy for {service} using ArgoCD with rollback when error rate exceeds {threshold}."

"Review this CI/CD pipeline for security, speed, caching, secrets exposure, and rollback risk: {paste_pipeline}."

"Convert this manual deployment process into a GitOps workflow: {paste_steps}."

"Create a safe production deployment checklist for {service} with pre-checks, deploy checks, and rollback checks."

"Explain why this Docker build is slow and suggest caching improvements: {paste_dockerfile}."

"Write a blue-green deployment plan for {service} running on {platform}."

"Generate a GitOps folder structure for {team} managing {number} services across {environments}."

"Debug this failed CI job and separate infra issues from application issues: {paste_job_logs}."

04. INCIDENT RESPONSE

"We are in a live incident. Service: {service}. Symptom: {symptom}. Last deploy: {time}. Give me the 5 most likely causes ranked by probability."

"Here is the incident timeline: {paste_timeline}. Write a 5-why RCA and identify the system failure, not the human error."

"Draft a postmortem for this incident: {paste_summary}. Audience: engineering leadership. Tone: direct, no blame."

"Create a live incident command checklist for {service} with roles, comms, metrics, rollback, and customer updates."

"Analyze this outage and identify what alert should have fired earlier: {paste_incident_details}."

"Write an executive incident summary explaining impact, root cause, recovery, and prevention in plain English."

"Turn this messy Slack incident thread into a clean timeline: {paste_thread}."

"Create a rollback decision tree for {service} when latency, errors, or saturation crosses thresholds."

"Identify the most likely blast radius from this failure: {paste_architecture}."

"Write a customer-facing incident update that is transparent but does not overpromise: {paste_status}."

05. FINOPS & CLOUD COST

"Here is my AWS Cost Explorer export for {month}: {paste_csv}. Identify the top 5 cost drivers and one action per driver."

"Explain this cloud cost spike in plain English for a non-technical CFO: {paste_anomaly_data}."

"Review this Kubernetes cluster for cost waste using nodes, requests, limits, idle workloads, and autoscaling data: {paste_data}."

"Find possible NAT Gateway, data transfer, EBS, snapshot, Load Balancer, and CloudWatch cost leaks from this bill: {paste_bill}."

"Create a tagging governance policy for {cloud} that supports showback by team, environment, and product line."

"Analyze this workload and recommend whether it should use on-demand, reserved, spot, savings plans, or autoscaling: {paste_usage}."

"Write a cost anomaly investigation runbook for AWS, Kubernetes, and observability tools."

"Convert this cloud bill into an engineering action plan with owner, priority, savings estimate, and risk: {paste_bill}."

"Identify overprovisioned Kubernetes workloads from this requests/usage data: {paste_metrics}."

"Create a monthly FinOps review template for engineering managers and finance leaders."

06. SECURITY & DEVSECOPS

“Review this Kubernetes manifest for security risks: {paste_yaml}. Check privileges, capabilities, hostPath, secrets, probes, and network exposure.”

“Review this Terraform code for public exposure, weak IAM, insecure defaults, missing encryption, and logging gaps: {paste_code}.”

“Create a DevSecOps threat model for {service} running on {cloud} with Kubernetes and CI/CD.”

“Analyze this IAM policy and identify excessive permissions, privilege escalation paths, and safer alternatives: {paste_policy}.”

“Write OPA/Kyverno policies to prevent privileged containers, latest tags, missing resource limits, and public LoadBalancers.

“Review this GitHub Actions workflow for secret leakage, dependency risks, token permissions, and supply chain issues: {paste_workflow}.”

“Explain this vulnerability scan result and separate critical exploitability from noisy CVEs: {paste_scan}.”

“Create a secrets rotation plan for {service} with zero downtime.”

“Write a container hardening checklist for {language} apps running in Kubernetes.”

“Generate a production-ready security review checklist for a new microservice before launch.”

07. OBSERVABILITY & SRE

"Design golden signals for {service}: latency, traffic, errors, saturation, plus business-level indicators."

"Review these alerts and identify which are noisy, missing, duplicated, or not actionable: {paste_alerts}."

"Turn this dashboard into an SRE-ready observability view. What panels are missing? {paste_dashboard_details}."

"Write PromQL queries for {service} to monitor error rate, p95 latency, saturation, restarts, and availability."

"Create an SLO for {service} with SLIs, error budget, burn rate alerts, and escalation rules."

"Explain this latency spike using traces, logs, and metrics: {paste_observability_data}."

"Create a runbook for high p95 latency in {service} with first 10 checks."

"Analyze these logs and identify the pattern that matters: {paste_logs}."

"Write a practical alert naming and severity standard for an engineering team."

"Design an on-call dashboard for {service} that helps diagnose incidents in under 5 minutes."

08. PLATFORM ENGINEERING

"Design a paved-road developer platform for {team_type} shipping {service_type} workloads on Kubernetes."

"Create a self-service template for developers to deploy a new microservice with CI/CD, observability, secrets, and rollback."

"Review this platform architecture and identify bottlenecks, ownership gaps, and operational risk: {paste_architecture}."

"Write an internal developer portal checklist for onboarding a new service."

"Create a scorecard to measure platform maturity across reliability, security, cost, speed, and developer experience."

"Design a service catalog schema for {company} including owners, dependencies, SLOs, runbooks, repos, and dashboards."

"Write a platform engineering roadmap for the next 90 days based on these pain points: {paste_pain_points}."

"Create a golden path for deploying APIs to Kubernetes using GitOps."

"Suggest which platform tasks should be self-service, automated, or still reviewed by humans."

"Write internal documentation explaining how developers should request infrastructure changes safely."

09. DOCUMENTATION & RUNBOOKS

"Write an on-call runbook for {service} covering the 5 most common alerts, what each means, and first 3 steps."

"Convert this Slack incident thread into a structured postmortem: {paste_thread}."

"Write onboarding documentation for a new engineer joining a team running {stack} on {cloud}. Include first-week checklist."

"Convert this architecture into plain-English documentation for engineering, product, and leadership: {paste_architecture}."

"Create a production readiness checklist for {service} before launch."

"Write a runbook for database connection saturation in {service}."

"Turn this tribal knowledge into clean documentation: {paste_notes}."

"Create a handover document for an engineer leaving the {service} team."

"Write a rollback runbook for {service} with decision points and commands."

"Create a documentation template every service must have before going to production."

10. AI AGENT GOVERNANCE

"Review this AI-generated Terraform code as if it is going to production. Identify unsafe assumptions, missing context, and approval gates: {paste_code}."

"Create a human approval policy for AI agents making changes to CI/CD, Terraform, Kubernetes, and production databases."

"Write a safe Claude Code workflow for DevOps tasks where the AI can suggest changes but cannot apply them directly."

"Design an AI agent permission model for DevOps with read-only, staging-write, and production-change levels."

"Create a checklist for reviewing AI-generated Kubernetes manifests before merge."

"Identify which parts of this incident response workflow can be AI-assisted and which must stay human-owned: {paste_workflow}."

"Write guardrails for using Claude with secrets, logs, customer data, cloud configs, and production incidents."

"Create a prompt review checklist to prevent Claude from hallucinating infra commands during incidents."

"Design a safe AI-assisted Terraform workflow using plan review, policy checks, approvals, and audit logs."

"Build an internal DevOps AI usage policy for {company} that covers prompts, data privacy, production access, approvals, and auditability."
